## Introduction

Ordering prescription medication online no longer means complicated steps or pharmacy lines. With licensed telehealth reviews and modern wallet-based checkout options, patients can complete the entire process smoothly from anywhere.

---

## What Is Adderall and Why Is It Prescribed?

Adderall is a prescription stimulant medication containing amphetamine salts. It works by increasing dopamine and norepinephrine activity in the brain, helping improve attention span, focus, and impulse control.

It is commonly prescribed in the US for:

- ADHD (Attention Deficit Hyperactivity Disorder)
- Narcolepsy and related sleep disorders
- Clinically diagnosed concentration challenges

Because Adderall is a controlled substance, strict US prescribing and dispensing rules apply.
